

## The Existence of God

by

Kit Johnstone, Ph.D.

It is very straight forward to prove mathematically God’s existence. All existing things are witnesses to the existence of God the Creator, you exist therefore God exists. Descartes, however, went one step further and mathematically more rigorous, being himself a mathematician. Simply saying, ‘I exist, therefore God exists’ is all right, but how do you know that *you* exist in the first place? So Descartes’ proof of the existence of the Creator goes two steps. Firstly, I think, therefore I exist. Secondly and lastly, I exist, therefore God exist. We often misunderstand him, taking his *I think therefore I am* to be his main philosophy, whereas he said that only to be able to prove better that God exists. It is one thing to know what a man said, it is quite another to know what he was saying.
